John Lagadinos  
Pulse Systems  
222 Bolivar St  
Canton, MA 02021

John,

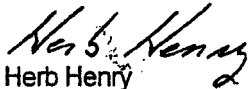

I would like to formally thank you and Pulse Systems/Magcap for the hard work and sound design you and you employees have put into the 1 Megawatt Dual Channel C-Band modulator. This system meets or exceeds all of our original requirements, and far exceeds our expectations in pulse fidelity and quality of workmanship. As far as I can tell, this is the best equipment produced anywhere in the world today for driving this particular tube. Pulse Systems' high power pulse engineering capability and workmanship are as good as any and better than most. Thanks to your efforts here, we intend to deliver to France three of the best 1 MW transmitters ever produced by BAE (Vitro, Tracor, Marconi) of Fort Walton Beach.

I trust that you will consider this transmitter and lower power derivations of it to be Magcap standard products for use in applications world-wide and for years to come.

It indeed is a pleasure to do business with you, John, and your company, and it has been for the past fifteen years. I hope we continue this business relationship for decades to come.

Be assured that when asked who builds the best modulator for the CPI SFD-313, my answer will be John Lagadinos.

Best Regards,

Herb Henry
